BTS Secures VoIP Phone Systems with Latest Cybersecurity Solution

Leading MTSP Protects IT and Voice Networks to Ensure Organizations Are Properly Connected with Customers

BIRMINGHAM, AL – September 30, 2025 - BTS, a leading managed technology services provider (MTSP), announced today that it has launched a new layer of cybersecurity designed to enhance the security of VoIP phone systems for small and mid-sized businesses (SMBs), non-profits and institutions. With VoIP phones functioning as “minicomputers,” they have become a growing target for cyberattacks, data breaches, and misuse if left unprotected.

One of the most overlooked issues with VoIP is voice quality. Poor call clarity is often the result of organizations failing to prioritize voice data over less critical traffic, like streaming video, online gaming, or music services. Without firewalls that prioritize voice, organizations can experience dropped calls, choppy audio, or lag—serious problems for any company where communication is mission-critical.

“Think of it this way,” added Roger Wentowski, President of BTS. “If your employees are downloading large files, streaming videos for work or fun, or playing online games, that traffic can eat up your Internet bandwidth. Without a high-quality firewall prioritizing voice traffic, it’s

no surprise that your VoIP calls sound terrible...not to mention less secure.”

Unlike many providers who overlook this issue, BTS makes firewalls a mandatory component of every VoIP phone system deployment. This ensures that organizations not only protect themselves from cyber threats but also enjoy crystal-clear call quality, uninterrupted connectivity, and the peace of mind that their communication systems are fully secured.

“Too many businesses still treat their phones like ‘just phones,’ when in reality, they are computers connected to the network. If left unsecured, VoIP phones can become a hacker’s gateway into your entire IT infrastructure,” added Wentowski.

BTS’s solution integrates firewalls that are specifically designed to secure both IT and voice networks. This technology ensures VoIP systems are locked down against cyber threats while simultaneously improving voice quality.

With cyberattacks on the rise, organizations can no longer afford to leave any part of their technology environment exposed—including phones. BTS’s proactive approach guarantees that every VoIP installation is safe, reliable, and future proof.

ABOUT BTS TECHNOLOGIES, INC.

Founded in 1976, BTS Technologies is Alabama’s leading managed technology services provider. The company’s mission is to increase its customers’ profitability, improve their productivity and give them a competitive advantage by implementing the right technology. BTS Technologies is the only provider that protects its customers from the two risks of technology - obsolescence and cost. As its customers’ trusted technology advisor, BTS Technologies has earned the position as the market leader and its customers’ business through quality products and services.

BTS Technologies is a premier Member of Technology Assurance Group, an organization of leading managed technology services providers (MTSPs) in the United States and Canada representing \$800 million in products and services. This means that the organization is the ultimate resource for Managed IT Services, Cybersecurity, Cloud Solutions, Business Phone Systems (VoIP), and Video Surveillance. BTS Technologies delivers future technology today! For more information, please visit www.askbts.com or call 205.290.8400.
